

## CLOTH BAGS & JUTE BAGS

### Why Should We Prefer Cloth Bags or Jute Bags over Plastic?

- Cloth bags are made from 100% cotton, antibacterial and recyclable materials according to the raw materials used.
- Jute Bags which are made from jute fibres, are very strong and highly durable, 100% biodegradable (it degrades biologically in 1 to 2 years), low-energy recyclable, and cause no threat to the environment.
- Cloth and Jute bags can be used for many years, depending on the raw material used, sewing quality, usage areas and shape.
- Textile dye and water based paints which are not harmful to health are used in the prints of cloth bags with a nature friendly label on.
- Most importantly, These bags are **biodegradable** so they do not pollute the environment.

These bags, because of their reusable nature, help **reduce the amount of single-use plastic** being used and inadvertently

discarded into the environment. Cloth bags are also multipurpose, which means that you could reduce your plastic use in many areas of your life.

There are many aspects of our lives where we can consciously cut down or eliminate our plastic use. One of the easiest and most impactful ways is to invest in a cloth bag. They're **economical**, more **sustainable**, and might just give you the peace of mind that you're preventing plastic pollution with every use

Even if the jute bag was slightly torn up, instead of throwing it away, we can make some great things which are quite useful for our household. In which one of the ideas is -making a doormat by taking a couple of old jute bags by removing the front and back panels, sew together binding with side pieces.
