

CERAMICS

Ceramics are biodegradable. They are beautiful objects made from clay, which potters can shape into anything. They are made from clay and other earth materials, so when they eventually get broken down, they meld with the soil and pose absolutely no harm.

What happens if we throw them away?

When they are broken, you can't attempt to incinerate it because you can't burn it. It already withstood its test of fire when it was being created and we cannot toss them into the trash, because ceramics have sharp edges when they break, so anyone who steps onto that unknowingly may get seriously injured. Besides from this, though they are biodegradable, however, most times, they do not break down for a long time. They can remain the exact way they are for years and often do when they are not correctly disposed of.

REUSING :

There are several DIYs you can create from your damaged ceramic items.

For example, You can now take that broken ceramic bowl and turn it into a flower vase or a bowl for your keys. Plates can be used to make a cake stand.

To recycle the broken materials take it to the commercial recycling center or donate them to a thrift store to ensure they're being offloaded responsibly.
