

THREAD WASTE

- Thread waste is a biodegradable waste.
- The hard, thready waste left on bobbins or collected during operations such as spinning, twisting, and weaving.

METHODS OF REDUCING THREAD WASTE

- To reduce thread wastage you need to calculate thread consumption correctly and purchase thread according to your consumption sheet.
- After your work if there is an extra thread left over then you can save and use it for other purposes instead of throwing it away.

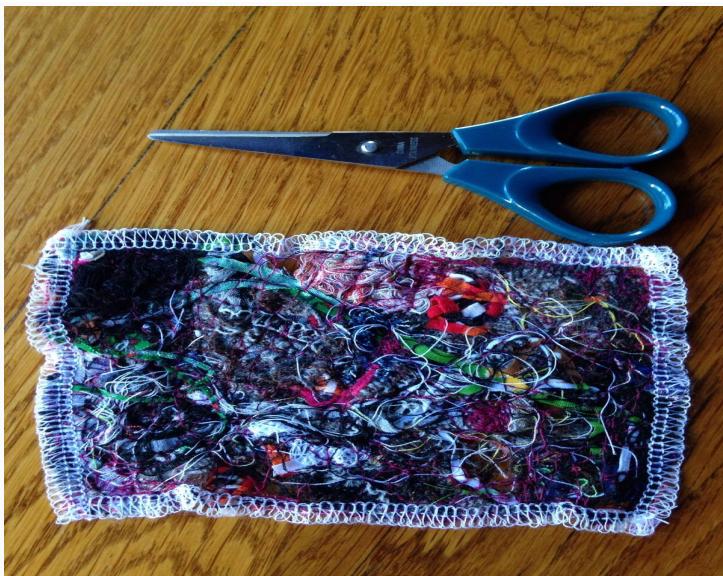

RECYCLING FABRIC WASTE

- Fabric waste recycling method

REUSE FABRIC WASTE

★ Sew between tulle or water-soluble material.

- ★ Sew them into your projects, use them as embellishments.
- ★ Donate them to preschool for arts and crafts.
- ★ Filling for toys and cushions.

- ★ Machine embroidery or hand embroidery transforms metallic threads into colorful clothing embellishments.
- ★ Most thread wastes are reduced by reusing them again and again until they become useless.

You can go to nearby textile shops to hand over your leftover thread so that they will be able to make some useful material from it.

In this way, we can reduce some amount of waste.
